

Goal:

Provide a pathway to continuously reduce our carbon footprint at the office
Encourage employee awareness of sustainability

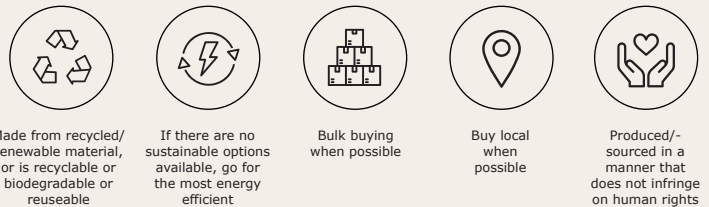

Waste management

At Mushlabs, we align with national and state legislation on waste management and follow the five-tier waste hierarchy.

Office purchasing

General guidelines for purchasing:

Equipment usage

Being green at the office means ensuring that all low-hanging fruit that can be picked to improve sustainable behavior is picked. This means using the available equipment as sustainably and as efficiently as possible.

- Plug in monitors to appropriate sockets
- Switch off lights and monitor switches
- In colder months, turn down heating to 2 at the end of the workday

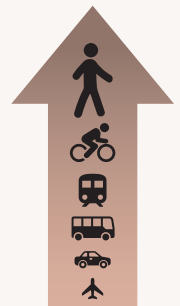

Resource use monitoring

To ensure efficiency, monthly records of our resource use (electricity, energy (gas) and water) will be tracked.

Employee travel

- ▶ Short trips, walking or taking a bicycle are the best ways to ensure you have the lowest carbon footprint while travelling.
- ▶ Moderate trips (e.g., office commute in Hamburg and Berlin), taking public transport (buses, U-Bahn, S-Bahn) is the best option when walking or taking a bicycle is not possible.
- ▶ **Long trips, rule of thumb for Mushlabs:**
Less than 1000km = Going by rail is a better choice
Over 2000km = Going by air is a better choice
